

COVID-19

How to calculate the number of people for the size of your room

1. Measure the length of the room*
2. Measure the width of the room*
3. Multiply the length by the width to calculate the area of your room in square meters (m^2)
4. Divide the area of your room (calculated in square meters) by 4 to calculate the maximum number of people allowed

* The room being measured must be usable dining space, therefore can not include kitchens, store rooms, bathrooms etc.

Example

You own a cafe

Length = 4.5 meters

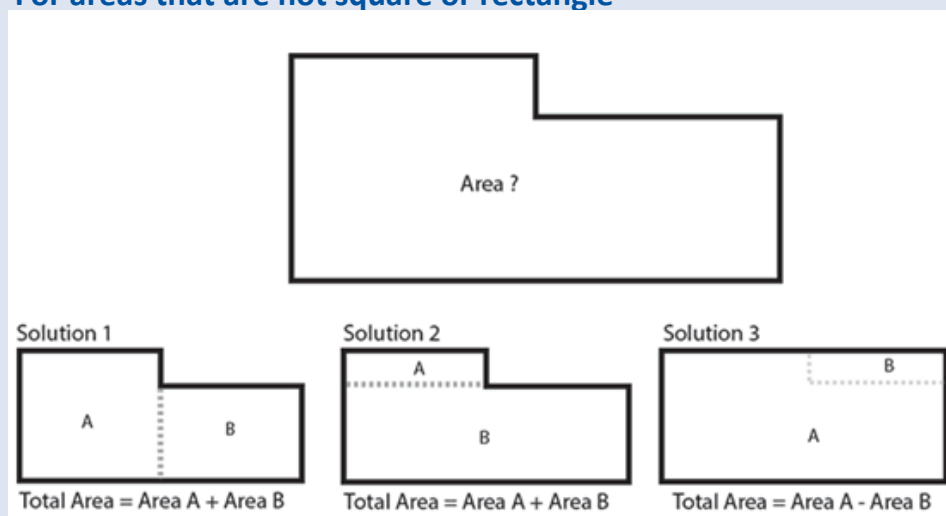

Width = 6.9 meters

Square meters = 31.05 ($4.5m \times 6.9m$)

Maximum number of people = 7 ($31.05 \div 4 = 7.76$)

Keep in mind, the maximum limit for people in a cafe dining inside is 10 and outside is 10. So even if the size of your space is big enough to hold 100 people with 4 square meters of space per person, you must adhere to the 10 patron maximum.

For areas that are not square or rectangle

Number of People Minimum space required

1	$4m^2$
2	$8m^2$
3	$12m^2$
4	$16m^2$
5	$20m^2$
6	$24m^2$
7	$28m^2$
8	$32m^2$
9	$36m^2$
10	$40m^2$
