

FOOTPATH CONDITION INSPECTION

What we're doing...

We are undertaking an assessment of the city's 1012km network of shared footpaths. Inspection work will begin Tuesday 16th October and last approximately three weeks.

How's this happening :

- These activities are undertaken by council's asset inspection contractor, Infrastructure Management Group as an asset management initiative to obtain detailed video imaging and condition assessment of the city's footpath assets.
- You may observe quad bike style inspection vehicles traveling on public footways around your work, residences or other locations within the city during this period.
- The assessment vehicles are operated by certified pavement inspectors travelling at a brisk walking pace with hazard lighting & other warning devices in operation while completing assessment and video recording activities of footpaths, cycle ways and shared access ways.
- Vehicles are clearly identifiable and operators will be vigilant and yield where ever possible to the needs of the pedestrian public.
- We thank you for your tolerance during this brief period of shared amenity access and look forward to providing the benefits of this exercise.

How this affects you...

Your Privacy :

All cameras are focused on the footpath surface structure with some limited viewing of areas directly adjacent. No image recordings of commercial or residential, private properties or structures will be undertaken.

The Benefits :

The information gained from this exercise will enable better management of this important community asset, enabling more effective maintenance and renewal strategies and improving the connectivity mobility & safety.
